Likely HW bird strikes at home - none

Updated to 04 March 2021

Attracted to suet at feeders

Note: the chart displays the number of days in a given month in which the species was seen. This says nothing of total bird numbers: though commonly with this species one sees an individual or a pair in a day. This is a **minimum**, as the observer was not present continuously (some multi-week absences in some years), not observing from dawn to dusk, and not necessarily near the best feeding and roosting sites for the species.
